Standard Kerb Types and Installation Details Foreword

The City of Perth has adopted an approach for street enhancement projects to introduce more resilient granite kerbs to city centre streets; maintaining exposed aggregate concrete footpaths for the majority of situations; and identifying high profile locations for granite footpaths. This approach provides for a staged transition towards full granite footpaths in the future.

The type of furniture to be installed for street enhancement projects varies depending on the level of amenity proposed. The furniture palettes for the different levels of amenity is addressed in *Book 300 - Standard Footpath Design and Installation Details*.

The various levels of amenity call for various styles of furniture. This Book covers all standard pieces of furniture and installation details, regardless of the level of amenity adopted for the street enhancement.

All footing & Bolting systems must be approved & signed off by an experienced & NER registered structural engineer.

For further information regarding footpath design and installation details refer:
