

## Street Tree Guide 2023

# Appendix B:

## Street Tree Species Matrix

The Street Tree Species Matrix nominates which species are to be planted on each street throughout the City. It is to be read in conjunction with the Street Tree Guide and Tree List.

Several options are generally provided for each street to encourage diversity, resilience and options for large and small spaces. Species should be carefully assigned to individual locations to maximise canopy cover and minimise maintenance?

All street trees planted by internal and external parties must adhere to this list. Any deviations must be approved by the City.

### Poyphageous Shot-hole Borer (PSHB)

*Red text* indicates species identified as a reproductive host of Polyphageous Shothole Borer (at the time of printing) by the Department of Primary Resources and Industry.

It is advised that alternatives to these PSHB species be preferenced over those currently identified at risk, where possible.

\* Indicates species which provide excellent shade.

^ Indicates caution required choosing location and/or additional irrigation may be required.
